

Automating Processes, Data Analytics Portal Development

THE PROBLEM

A pharmaceutical company specializing in developing and providing innovative medications tailored to pediatric patients' needs faced inefficiencies due to manual data processes and lacked a centralized platform for data analytics, hindering data-driven decision-making.

THE SOLUTION

Our team leveraged Curator by Interworks to develop a web application, automating processes and creating a centralized data analytics portal. We integrated data from Snowflake, Postgres, IQVIA, Symphony, manufacturing, and regulatory compliance sources using dbt and Snowflake.

THE OUTCOME

By automating manual processes and centralizing data analytics, our client achieved improved operational efficiency,

enhanced data visibility, and empowered data-driven decision-making, leading to increased productivity and regulatory compliance.
